

New York's Leading Architectural, Interior Design And Planning Firm

Landow and Landow Architects, LLP

Landow and Landow Architects, LLP, (Landow), is a family-owned and operated award winning architectural, interior design and planning firm in New York City that was first established in 1922 by Abraham Landow, who was later joined in 1960 by his son Lloyd J. Landow.

In later years, sons Marc J. Landow and Glen J. Landow and daughter Robin Landow Levitin joined the firm as principles. With an extensive roster of successful projects throughout the region and a team of experienced and creative design professionals, Landow and Landow continues to build a strong reputation for highly personalized service, creativity and design innovation. The firm has strong experience serving health care, education, commercial and institutional clients.

Since Landow's inception, the firm has achieved recognition as a practice built on creativity, innovation, and personal service that respects clients' long-term goals, schedules and budgets. Landow provides a full range of building planning services including architecture, planning, interior design, graphic design and artwork selection. The firm's pre-design services include site identification and evaluation, facility analysis, long-range planning, building program development, public presentations, and assistance with CON, loan applications and capital campaigns.

The firm is devoted to creating exciting, functional and comfortable environments that add value to its clients' operations and facilities. Landow is continually committed to taking an original approach to each project, taking into account the purpose, needs and aesthetic of each property. As part of its Total Quality Management Program, each project is monitored by independent team members to ensure the highest level of quality and service. Within Landow, and in conjunction with

its engineers, they constantly question whether each design decision satisfies the client's requirements for the project, is the best and most cost-effective solution to satisfy the design parameters and can be constructed within the budget. During the development of the

design, they meet with contractors and subcontractors to solicit their input on material availability, methods of construction and cost effectiveness.

Landow has worked on many prestigious projects, including the \$61-million campus design in Coney Island, which contained the 360-bed, shorefront Jewish Geriatric Center and the 13-story, 116-unit Shorefront Towers assisted living facility. The project required the firm to complete approximately 100,000 square feet of office space for the client to house their corporate offices, their Home Health Care operations center and their Elderplan division. The firm has also completed over 250 projects for Citibank and its subsidiaries, including an award-winning kiosk designed for mass-production automated banking.

Recently partners Robin Landow Levitin, AIA, and Glen J. Landow, AIA NCARB, have received LEED Professional Accreditation. Their accreditation is a significant step in the firm's ongoing commitment to green building design. As LEED APs, Robin and Glen have been recognized by the U.S. Green Building Council as design professionals with the knowledge and skills to successfully steward the LEED certification process.

Landow helps its clients think beyond the scope of their experience to be certain that their building program will satisfy their needs now and in the predictable future, which sets the firm apart from its competitors.
